Fix deploy: single port + prod server only

Edit `.replit`: remove all extra `[[ports]]` and any `[env]` `PORT` block. Keep exactly:

```
[[ports]]
localPort = 80
externalPort = 80
```

Ensure `[deployment]` is:

```
[deployment]
deploymentTarget = "autoscale"
build = ["npm", "run", "build"]
run   = ["npm", "run", "start"]
```

Confirm `package.json` has
`"start": "NODE_ENV=production node dist/index.js"` and **no Vite dev server** in prod.

Republish. If Promote fails, show me the final `.replit`, `package.json` scripts, and the first 100 lines of Promote logs.
